

Rectifier Transformer Current/Temperature Detection System

Host Real-Time Monitoring Local Data
 Support: 4~20mA/Thermistor/Thermocouple
 Make Industrial Equipment More Safety & Efficient

For more information, please refer to Download- Applications

A-1019

This Application is used in data acquisition, including analog, temperature and so on. A-1019 acquisition module using RS-485 bus connection, and then through the ATC-3002 MODBUS gateway data conversion into Modbus TCP, Host real-time monitoring of field data. Application diagram as below:
